

My understanding is that the NAB is trying to limit satellite radio's ability to broadcast content to satellite radio users. As a satellite radio user, there should be no reason that this medium of broadcast should be governed any differently than FM, AM...or any other mode of communication broadcast. I specifically purchased satellite radio for increased content...not currently found on FM or AM radio. Satellite radio should not be limited in its ability to operate freely to subscribers.  
Thanks for your time!
